

# AIRx JET CLEAN

## Easy-to-use Carpet Spotter

Ready-to-use carpet cleaner using 3rd generation encapsulation technology for removing spots on carpets

The biggest problem in carpet cleaning & maintenance is soil re-deposition which can cause traffic lane patterns & a dirty, dingy appearance that can quickly reappear after cleaning. These occur because chemical residues left by carpet shampoos pass through a sticky, tacky phase where soils adhere to the fibers causing re-occurring traffic lane patterns & spots that appear to wick-back. These residues are left behind, even after repeated rinsing.

**AirX Jet Clean** brings completely new technology to carpet cleaning. It has a neutral pH, cleans better & dries faster than other cleaners, but its major benefit is that there is no sticky residue to cause re-soiling as with other cleaners.

**AirX Jet Clean** uses 3rd generation encapsulation technology which employs special surfactants & solvents activated in a water-based carrier. This evaporates quickly leaving a dry, dust-like powder residue which falls from the fiber & vacuums out easily. This 'Dehydration Phase Cleaning' means soils & cleaner residues are dehydrated into a powder that has no adhesive qualities, thereby eliminating re-soiling problems.
