

AIRx[®] STAY CLEAN

Anti Resoil Carpet Cleaner

3rd generation encapsulation technology to prevent re-soiling.

The biggest problem in carpet cleaning & maintenance is soil re-deposition, producing traffic lane patterns & a dirty, dingy appearance that quickly reappears after cleaning.

These occur because chemical residues left by carpet shampoos pass through a sticky, tacky phase where soils adhere to the fibers causing re-occurring traffic lane patterns & spots that appear to wick-back. These residues are left behind, even after repeated rinsing.

AirX Stay Clean brings completely new technology to carpet cleaning. It has a neutral pH, cleans better & dries faster than other cleaners, but its major benefit is that there is no sticky residue to cause re-soiling as with other cleaners.

AirX Stay Clean uses 3rd generation encapsulation technology which employs special surfactants & solvents activated in a water-based carrier which evaporates quickly leaving a dry, dust-like powder residue which falls from the fiber & vacuums out easily. This 'Dehydration Phase Cleaning' means soils & cleaner residues are dehydrated into a powder that has no adhesive qualities, thereby eliminating re-soiling problems

AirX Stay Clean is an economical concentrate but its biggest saving is that by preventing re-soiling it postpones or eliminates the need for future cleanings.

AirX Stay Clean is very versatile. It can be used on all colour-fast carpets through all types of extraction equipment.

AirX Stay Clean Anti Resoil Carpet Cleaner

AirX Stay Clean is a blend of the latest modern surfactants that even though neutral in pH, provide an outstanding deep-clean on even the most tenacious soils. AirX Stay Clean is quite unique in terms of the speed at which it dries out, & unlike other cleaners it leaves no sticky residue to promote re-soiling.

Benefits

- **SUPERIOR CLEANING** - Quickly penetrates, emulsifies, loosens, & suspends tenacious soil for complete removal.
- **DRIES FASTER** - All components dry as fast or faster than the water phase, allowing cleaned areas to be re-opened earlier to traffic.
- **VERSATILE USE** - **AirX Stay Clean** may be used with just about every type of carpet cleaning equipment & with every mechanical or manual method of cleaning & spotting.
- **NO STICKY RESIDUE** - Unlike typical cleaners that dry to a gummy sticky residue, **AirX Stay Clean** dries to a non-absorbent, soil resistant powder that can easily be removed.
- **NO IMMEDIATE VACUUMING** - there is no residue that must be removed as part of the cleaning job.
- **SAVES TIME & LABOUR** - **AirX Stay Clean's** soil resistance eliminates or greatly postpones the need for many future cleanings.
- **IMPROVES VACUUM CLEANING** - Soil that would adhere to the carpet after cleaning with a competitive product, does not stick, & can instead be easily & completely removed by routine vacuuming.
- **CONTAINS AIRICIDE ODOUR COUNTERACTANT** to eliminate odours released by carpet cleaning or already present in the air.

Uses

For use on any quality carpet or rug not harmed by soap & water. May be used through any carpet cleaning equipment including all extraction machines.

Directions

FOR EXTRACTION CLEANING – Dilute 15-30ml of **AirX Stay Clean** per litre of water & use according to machine directions.

Specifications

APPEARANCE OF LIQUID	clear, colourless
PH	7.0 +/- 0.5
BIODEGRADABILITY	rapid & complete
ODOUR COUNTERACTANT	Airicide
RESIDUAL	clear, transparent, non-sticky, friable
NON-AQUEOUS CONTENT	33.9%
SHELF LIFE	Min 2 years at room temperature
FLAMMABILITY	non-flammable
