

PRODUCT INFORMATION SHEET

Flash Dry

Flash Dry is added to the final rinse in dishwashing machines to make the water sheet off to reduce drying time and leave items sparkling

FEATURES

- Flash Dry can be used in all types of dishwashing machines from domestic units through to large commercial dishwashers.
- Flash Dry is a concentrated product so only a small amount is needed each cycle. This makes the product very economical.
- The special blend of low foaming detergents used makes the water sheet off easily, leading to reduced spotting and streaking making glasses sparkle.
- Flash Dry also contains a special additive to reduce scale build up in rinse lines

HOW TO USE

- In commercial dishwashers Flash Dry is usually added through an automatic feeder. This is adjusted by a Chemflo technician to inject the optimum amount for best results.
- In domestic machines simply add Flash Dry to the rinse aid holding tank when required.
